

boost::statechart::  
event< EvWaypoint95  
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint95< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint95< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a vertical inheritance relationship. The top class is 'boost::statechart::event< EvWaypoint95< TSource, TOrthogonal > >' and the bottom class is 'cl\_move\_base\_z::EvWaypoint95< TSource, TOrthogonal >'. A blue arrow points from the bottom class to the top class. The bottom class also has a public attribute '+ waypointIndex'.

cl\_move\_base\_z::EvWaypoint95  
< TSource, TOrthogonal >

+ waypointIndex
