

```
boost::statechart::  
event< EvTrue< TSource,  
        TState > >
```

A UML class diagram illustrating inheritance. The base class, `boost::statechart::event< EvTrue< TSource, TState > >`, is shown in a white box with a black border. It has two empty rectangular compartments below the name. The derived class, `smacc::event_generators::EvTrue< TSource, TState >`, is shown in a gray box with a black border, also with two empty rectangular compartments below the name. A blue arrow with an open triangular head points from the derived class to the base class, indicating inheritance.

```
smacc::event_generators  
::EvTrue< TSource, TState >
```
