

smacc::SmaccState::  
configure\_orthogonal

smacc::SmaccState::  
configure\_orthogonal  
\_runtime

smacc::ISmaccState  
::configure

```
graph LR; A[smacc::SmaccState::configure_orthogonal] --> C[smacc::ISmaccState::configure]; B[smacc::SmaccState::configure_orthogonal_runtime] --> C;
```

The diagram illustrates a relationship between two specific methods and a base class method. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'smacc::SmaccState::configure\_orthogonal'. The bottom box contains the text 'smacc::SmaccState::configure\_orthogonal\_runtime'. On the right, there is a single gray rectangular box with a black border containing the text 'smacc::ISmaccState::configure'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both methods on the left inherit from or implement the 'configure' method of the 'ISmaccState' interface.
