

smacc::SmaccState::  
configure\_orthogonal

smacc::SmaccState::  
configure\_orthogonal  
\_runtime

smacc::ISmaccState  
::configure

```
graph LR; A[smacc::SmaccState::configure_orthogonal] --> C[smacc::ISmaccState::configure]; B[smacc::SmaccState::configure_orthogonal_runtime] --> C;
```

The diagram illustrates a relationship between three code elements. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'smacc::SmaccState::configure\_orthogonal'. The bottom box contains the text 'smacc::SmaccState::configure\_orthogonal\_runtime'. On the right, there is a single gray rectangular box with a black border containing the text 'smacc::ISmaccState::configure'. Two blue arrows point from the right side of each white box to the left side of the gray box, indicating that both 'configure\_orthogonal' and 'configure\_orthogonal\_runtime' methods of 'smacc::SmaccState' inherit from or implement the 'configure' method of the 'smacc::ISmaccState' interface.
