

boost::statechart::
event< EvWaypoint118
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint118< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint118< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a base class box at the top and a derived class box at the bottom. The base class box is divided into three horizontal sections: the top section contains the class name, the middle section is empty, and the bottom section is empty. The derived class box is divided into three horizontal sections: the top section contains the class name, the middle section contains the attribute '+ waypointIndex', and the bottom section is empty. A blue arrow with an open triangle head points from the top section of the derived class box to the bottom section of the base class box.

cl_move_base_z::EvWaypoint118
< TSource, TOrthogonal >

+ waypointIndex
