

boost::statechart::
event< EvWaypoint163
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint163< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint163< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a base class box at the top with a white background and a derived class box at the bottom with a gray background. A blue arrow with an open triangle head points from the derived class to the base class. The base class box has three horizontal sections; the top section contains the text 'boost::statechart::event< EvWaypoint163< TSource, TOrthogonal > >', while the other two are empty. The derived class box has three horizontal sections; the top section contains the text 'cl_move_base_z::EvWaypoint163< TSource, TOrthogonal >', the middle section contains '+ waypointIndex', and the bottom section is empty.

cl_move_base_z::EvWaypoint163
< TSource, TOrthogonal >

+ waypointIndex
