

boost::statechart::
event< EvWaypoint115
< TSource, TOrthogonal > >

```
classDiagram
    class Base["boost::statechart::event< EvWaypoint115< TSource, TOrthogonal > >"]
    class Derived["cl_move_base_z::EvWaypoint115< TSource, TOrthogonal >"]
    Derived --|> Base
```

The diagram shows a base class box at the top with a white background and a derived class box at the bottom with a gray background. A blue arrow with an open triangle head points from the derived class to the base class. Both boxes are divided into three horizontal compartments. The top compartment of the base class contains the text 'boost::statechart::event< EvWaypoint115< TSource, TOrthogonal > >'. The top compartment of the derived class contains 'cl_move_base_z::EvWaypoint115< TSource, TOrthogonal >', the middle compartment contains '+ waypointIndex', and the bottom compartment is empty.

cl_move_base_z::EvWaypoint115
< TSource, TOrthogonal >

+ waypointIndex
